Optical engineering is the field of study that focuses on applications of optics. Optical engineering deals with design of optical instruments such as lenses, microscopes, telescopes, and other equipment that utilizes the properties of light using physics and chemistry. Other prominent optical engineering applications include optical sensors and measurement systems, lasers, fiber optic communication systems, optical disc systems (e.g. CD, DVD), etc.

Optical engineering - Wikipedia

The Encyclopedia of Modern Optics, Second Edition, provides a wide-ranging overview of the field, comprising authoritative reference articles for undergraduate and postgraduate students and those researching outside their area of expertise. Topics covered include classical and quantum optics, lasers, optical fibers and optical fiber systems, optical materials and light-emitting diodes (LEDs).
